Full-Stack Software Engineer | React, TypeScript, Node.js / NestJS, PostgreSQL, AWS

Education

Manipal University Jaipur — Jaipur, India
Bachelor of Technology in Computer Science - 7.7/10 — *Sept. 2022 – May 2026*

Ann Mary School — Dehradun, India
ISC (Class 12) - 93.5% — *Apr. 2011 – May 2022*

Experience

Fullstack Engineer — Jan. 2026 – Present
MedikZo · early-stage doctor-booking startup — *Cooch Behar, WB (Hybrid, now Remote)*

- One of the **founding engineers** (2-person engineering team through launch): full-stack engineer developing across the **React** frontend, **NestJS / PostgreSQL** backend and **AWS Lambda** workers of a doctor-booking platform now serving **4,000+ users** and a **10-agent call center**.
- Led the agent console from its first working version: an SLA-sorted **React** queue board, appointment desk and book-on-behalf flow behind **2,400+ requests**, with agents placing **55% of all bookings**; median time-to-confirm fell **24 → 10 min** and SLA breaches **44% → 9.8%** as volume grew **3.6**×.
- Architected the analytics layer end to end: five **PostgreSQL** services (**3,800 lines** of SQL for cohorts, percentiles and conversion) feeding **31 charts** and per-agent scorecards in a new admin console.
- Developed **cloud telephony** across the stack: per-caller call threads in SQL, a dialpad and live-call workspace in React, and a private **S3** recording pipeline with least-privilege **IAM** and authenticated streaming: **26K+ calls**, **160K+ webhook events**, **24K+ recordings** (**97.8%** mirrored).
- Developed the workflow logic in **AWS Lambda** workers: recovery sweeps that re-dispatch stranded bookings **within 2 minutes**, **EventBridge**-scheduled jobs, assignment rules and an **SQS FIFO** deduplication fix.
- Owned infra and delivery for shipped features: **CloudFormation** (S3, CloudFront, OAC), least-privilege **IAM**, a **GitHub Actions** OIDC pipeline (build, S3 sync, CDN invalidation), SSM-backed ECS config; promoted **13** releases via dev → main auto-deploys on **ECS Fargate**, then **DigitalOcean** after the platform's migration.
- Debugged production from live data: **connection-pool exhaustion** (**10/10** connections pinned) fixed with bounded query concurrency; false agent time-outs cut **69% → 24%** of sessions, average session **82 → 199 min**.
- Architected a shared React UI package for four consoles (dependency-injected data hooks, render slots), removing **33K duplicated lines**; wrote **80+ migrations** and **367 tests** with the first integration harness.

Projects

Devs Owl | *Next.js, React, TypeScript, PostgreSQL, GraphQL* — Live | Github

- Built a developer-footprint aggregator merging **GitHub, LeetCode and open-source** activity: parallel **GitHub GraphQL** fan-out into a typed **PostgreSQL** schema via **Prisma**, **Next.js SSR** with request-level caching, **serverless on Vercel**; **50+ active users on launch day**.

Heyllo.ai | *Next.js 15, React 19, TypeScript, Vapi, Gemini, Firebase* — Live | Github

- Built a real-time **AI voice interview** platform on **Next.js 15**: **Vapi** voice agents (Deepgram → GPT-4 → ElevenLabs), **Gemini** scoring with **Zod**-validated structured output, and **Firebase** auth with server-verified httpOnly session cookies.

Technical Skills

Languages: TypeScript, JavaScript, SQL, Python, C/C++, Rust, HTML/CSS
Frontend: React, Next.js, TanStack Query, React Router, Tailwind CSS, Ant Design, Vite
Backend: Node.js, NestJS, Express, REST APIs, Webhooks, GraphQL, TypeORM, Prisma, Zod, CASL, JWT
Databases: PostgreSQL (migrations, indexes, constraints, analytics SQL), Firebase / Firestore, MongoDB
Cloud & DevOps: AWS (Lambda, SQS, S3, CloudFront, IAM, SSM), CloudFormation, GitHub Actions CI/CD
Testing & Tools: Jest, Supertest, Vitest, Git, Turborepo, n8n, Claude Code
